

Heavy Fines from Breach Eliminated

CyberCompass quickly navigates to save \$500,000.

Overview

Imagine finding your personal identifiable information (PII) on a collaborative website. Not just your information, but that of thousands of patients. This patient immediately notified their medical practice, who was able to begin dealing with the problem.

When the breach was reported and the federal Office of Consumer Relations (OCR) audit was initiated. They were given two weeks to resolve the issue or face a \$500,000 fine.

“CyberCompass team came to the rescue. Everyone else quoted a minimum of 10 weeks and we had only 2 weeks. We were swimming upstream without a paddle. They guided us through the crisis and solve it in less than a week. Our business continued on without the severe financial setback.”

Approach

Custom Assessment

CyberCompass developed custom assessments for 4 separate facilities and 12 different departments and deployed an assessment across the business ecosystem in less than 4 days.

Fast Analysis

All the results were immediately loaded into CyberCompass platform that performed automated risk scoring and probability of breach occurrence as information was compiled in less than 7 days.

Discovery and Vindication

Based the assessment, it was discovered the breach was caused by a business associate versus the medical practice. The medical practice had a business associate agreement in place that transferred the liability to the business associate.

Reports Delivered and Accepted

The in-depth reports were delivered and OCR accepted the findings and report. The case was promptly dismissed without any additional documentation (one and done!)

Results

**2.5 times
Faster**

**\$500,000
Saved in fines**

**Priceless
OCR dismissal**
